Improvement District No. 9
IMPACT NOTICE

Lake Louise Fire Hall (LLFH) & Lake Louise Multi-Unit Residence (LLMUR)

Overview

Please be advised that that concrete pouring is scheduled to take place at the Lake Louise Fire Hall construction site on Wednesday, November 25, 2026.

We anticipate that the disruption will be similar to the impacts experienced during the recent gravel hauling activities. However, residents should expect some additional construction traffic and possible short delays while concrete trucks access the site.

Improvement District No. 9 (ID9) recognizes that the generators may result in additional noise in the surrounding area and is committed to taking reasonable measures to minimize disturbances to nearby residents and businesses.

Timeline & Impacts

To accommodate this work, residents can expect increased construction traffic throughout the day, including:

- Two concrete pump trucks operating at the site.
- Multiple concrete trucks travelling to and from the construction site.
- Increased vehicle and equipment movement in the surrounding area.

Construction personnel will be stationed along the roadway to coordinate truck movements, assist with traffic management, and help maintain safe access for motorists and pedestrians.

We appreciate your patience and understanding as this important community infrastructure project continues to move forward. Thank you for your continued support and cooperation.
