Improvement District No. 9
IMPACT NOTICE

Lake Louise Fire Hall (LLFH) & Lake Louise Multi-Unit Residence (LLMUR)

Overview

Please be advised that temporary generators will be installed at the Lake Louise Fire Hall (LLFH) and Lake Louise Multi-Unit Residence (LLMUR) construction sites beginning Monday, November 9, 2026.

The generators are required to provide temporary electrical power to support ongoing construction activities, including site trailers, temporary heaters, construction tools and equipment. They will remain in place for most of the project duration, until permanent electrical service has been established, which is currently anticipated in spring 2027.

Improvement District No. 9 (ID9) recognizes that the generators may result in additional noise in the surrounding area and is committed to taking reasonable measures to minimize disturbances to nearby residents and businesses.

Timeline & Impacts

Anticipated Installation and Duration

- Installation and operation anticipated to begin Monday, November 9, 2026.
- Generators are expected to remain in place until permanent power is established, currently anticipated for spring 2027.
- Generator operation will support construction activities at both project sites throughout this period.

Noise Considerations

The generators are housed in sound-attenuated, weather-resistant steel enclosures specifically designed to reduce engine noise.

The manufacturer's stated noise rating is approximately **63 dB(A), measured at 23 feet (7 metres)**. This is generally comparable to normal background conversation or background music in a restaurant.

Noise and Disturbance Mitigation

To minimize noise transmission and impacts on surrounding residential areas, the project team will implement the following measures:

- Position generators as far away from nearby residential areas as reasonably possible.
- Strategically position Sea Cans near and around the generator units to provide additional shielding and help reduce noise transmission toward surrounding residences.
- Ensure the generators' sound-attenuated enclosures remain in place during operation.
- Monitor noise levels and address any concerns that may arise during operation.

ID9 appreciates the community's patience and understanding while this essential construction work continues. Every reasonable effort will be made to minimize disruption throughout the project.
